

## Practical 7: Write functions to find FIRST and FOLLOW of all the variables.

**Aim:** Write a suitable data structure to store a Context Free Grammar. Prerequisite is to eliminate left recursion from the grammar before storing. Write functions to find FIRST and FOLLOW of all the variables. [May use unformatted file / array to store the result].

### Algorithm:

#### First ()-

If  $x$  is a terminal, then  $\text{FIRST}(x) = \{ 'x' \}$

If  $x \rightarrow \epsilon$ , is a production rule, then add  $\epsilon$  to  $\text{FIRST}(x)$ .

If  $X \rightarrow Y_1 Y_2 Y_3 \dots Y_n$  is a production,

$\text{FIRST}(X) = \text{FIRST}(Y_1)$

If  $\text{FIRST}(Y_1)$  contains  $\epsilon$  then  $\text{FIRST}(X) = \{ \text{FIRST}(Y_1) - \epsilon \} \cup \{ \text{FIRST}(Y_2) \}$

If  $\text{FIRST}(Y_i)$  contains  $\epsilon$  for all  $i = 1$  to  $n$ , then add  $\epsilon$  to  $\text{FIRST}(X)$ .

#### Follow ()-

$\text{FOLLOW}(S) = \{ \$ \}$  // where  $S$  is the starting Non-Terminal

If  $A \rightarrow pBq$  is a production, where  $p$ ,  $B$  and  $q$  are any grammar symbols,

then everything in  $\text{FIRST}(q)$  except  $\epsilon$  is in  $\text{FOLLOW}(B)$ .

If  $A \rightarrow pB$  is a production, then everything in  $\text{FOLLOW}(A)$  is in  $\text{FOLLOW}(B)$ . If  $A \rightarrow pBq$  is a production and  $\text{FIRST}(q)$  contains  $\epsilon$ ,

then  $\text{FOLLOW}(B)$  contains  $\{ \text{FIRST}(q) - \epsilon \} \cup \text{FOLLOW}(A)$

### Program:
